E-COMMERCE STARTUPS

The Problem,

1. E-commerce security that is easily broken into by hackers
2. UI & UX design is less attractive.

The Challenge,

1. In 2011, We helped small trader for online game voucher to become respectable regional player with online platform that accommodates payment system, and supported by security system that was advanced at that time. The platform serves billions of Rupiah monthly and still growing and generating good business up to this moment.
2. Transaction method that was proposed was deposit payment, it means lots of digital money stored in the system which can be exploited
3. We were asked to build a system that could accommodate up to 1.000 online visitors at a time
4. The UI / UX design should fit to game player but simple enough to navigate

The Solution,

1. We built a super secure, double layer protection for the digital voucher and for the deposits account and also create database encryption
2. We built the system using a mature framework and set the server so it could survive thousands of visitor at a time
3. We conducted researches and proposed several UI and UX designs to fit the gamer's mind.
